

Bitwise Operations Problems

- 1) Determine which ordered pairs make the following statement FALSE? $(A \text{ OR } B) \text{ XOR } (\text{NOT } A)$

- 2) How many ordered pairs make the following statement TRUE? $(\text{NOT } B) \text{ XOR } (A \text{ AND } B)$

- 3) Determine which ordered pairs make the following statement FALSE? $(A \text{ XOR } B) \text{ OR } (A \text{ OR } B)$

- 4) Determine which ordered pairs make the following statement TRUE? $(A \text{ OR } B) \text{ XOR } (A \text{ XOR } B)$

- 5) How many ordered pairs make the following statement FALSE? $(A \text{ AND } B) \text{ XOR } (A \text{ XOR } B)$

Bitwise Operations Problems

6) How many ordered pairs make the following statement FALSE? $\text{NOT}((A \text{ AND } B))$

7) How many ordered pairs make the following statement FALSE? $(A \text{ OR } B) \text{ XOR } (A \text{ OR } B)$

8) Determine which ordered pairs make the following statement FALSE? $(A \text{ OR } B) \text{ OR } (\text{NOT } B)$

9) How many ordered pairs make the following statement FALSE? $(A \text{ XOR } B) \text{ AND } (\text{NOT } A)$

10) Determine which ordered pairs make the following statement TRUE? $(A \text{ OR } B) \text{ OR } (A \text{ OR } B)$
